DETAILED ACTION

This office action is in response to applicant's communication of 2/18/2009.

Currently claims 13,15-26 are pending and claims 13, 15-17, 21-26 stand rejected.

Response to Arguments

Applicant's arguments with respect to claims 13, 15-26, have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

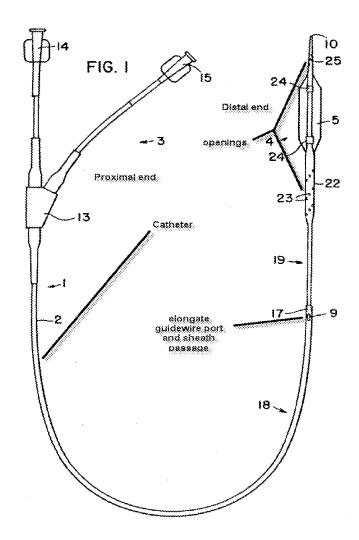

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13 and 15-17, and 21-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pfenninger (U.S. Patent Number 5,306,247) in view of Allman et al. (U.S. Patent Number 6,346,093).

Pfenninger discloses a catheter (near 2) comprising an elongate shaft having a distal and proximal end fluidly connected to an opening (25/23) at the distal end of the elongate shaft, an elongate guidewire port (near 9), and a polymer sheet with a passage over the guidewire port (see marked up figure 1)

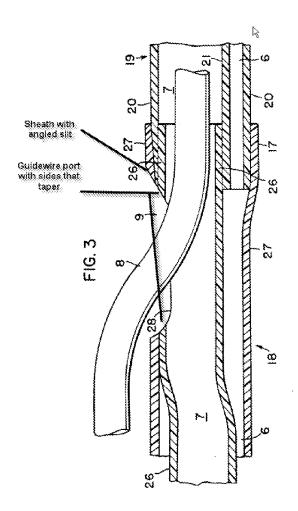

Art Unit: 3767

Further note the Sheath (27), angled slit see figure below, guidewire port (near 9 or 28) with tapered walls (see marked up figure 3 below).

Application/Control Number: 10/667,056

Art Unit: 3767

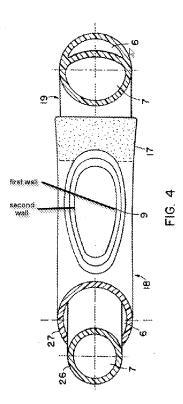

Concerning claim 15-16, see near 27 in figure 3.

Concerning claim 23 see marked up figure 4 below. Concerning claim 24 note slit length is larger then port length. Concerning claim 25-26 note port near 28 tapered edges as in figures 3 and 4.

Application/Control Number: 10/667,056

Art Unit: 3767

Pfenninger discloses the claimed invention except for the longitudinal angled slit configured to permit guidewire access through the guidewire port while maintaining a substantially fluid tight in use when no guide wire is provided. Allman teaches that it is known to use a longitudinal angled slit configured to permit guidewire access through the guidewire port while maintaining a substantially fluid tight in use when no guide wire is provided as set forth in paragraphs at column 8 lines 1-46 also see slit 118 in figure 4 and 4b or near 134 in figure 4c to provide and allow a guidewire to be radially slid into or out of the sheath assembly. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system as taught by Pfenninger with a longitudinal angled slit as taught by Allman, since such a modification would

provide the system with a longitudinal slit for providing and allowing a guidewire to be radially slid into or out of the sheath assembly.

Concerning claim 21 and 22, Pfenninger discloses the claimed invention except for the length of the guide wire port is at least six times greater then the width. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the guidewire port have a length six times greater then the width, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose, 105 USPQ 237 (CCPA 1955)*.

Allowable Subject Matter

Claims 18-20 are allowed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Gray whose telephone number is (571)272-7180. The examiner can normally be reached on Monday through Friday, 8:30 a.m. to 4:30 p.m. EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571) 272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
